

Thien Nguyen

LEAD SOFTWARE ENGINEER · SOFTWARE ARCHITECT · AGENTIC AI ARCHITECT

Greater Munich Metropolitan Area · +49 176 32434863 · nguyenphongthien@gmail.com · [linkedin.com/in/thiennp](https://www.linkedin.com/in/thiennp) · medium.com/@nguyenphongthien

SUMMARY

Lead Software Engineer & Architect with 10+ years designing resilient distributed systems, enterprise platforms, and developer tooling. Currently leads application architecture and engineering-effectiveness frameworks at CHECK24, where systems close 30,000+ contracts daily — scaling task-execution velocity 3–10x by engineering multi-agent orchestration layers (Cursor, Codex, automated feedback loops) across the SDLC. A hands-on technical lead and mentor with a founder's track record (Guardz, Wishees, Kim Tuoc Software), pairing a gifted mathematics background with strict engineering discipline: type-safe boundaries, SOLID design, and contract-first APIs.

TECHNICAL SKILLS & ARCHITECTURAL COMPETENCIES

AI & Agentic Systems

Agent Orchestration Durable State Machines Tool Calling
Evaluation Pipelines Inference Routing Prompt Lifecycle Mgmt
RAG / Context Retrieval MicroVM Sandboxing Agentic RBAC

Architecture & Systems Design

Platform Engineering Domain-Driven Design
Event-Driven Architecture Micro-frontends Feature-Sliced Design
Contract-First APIs High-Throughput Distributed Systems

Leadership & Delivery

Technical Leadership Mentorship & Hiring
Architectural Governance (ADRs) Cross-Functional Alignment
Founder / Executive Leadership

Languages & Frameworks

TypeScript JavaScript Python Node.js React Angular
Next.js Express RxJS Zustand Symfony Laravel
WebSockets REST GraphQL Vitest Playwright

Spoken Languages

English — Full Professional German — Professional Working
Vietnamese — Native

Agent Witch agentwitch.com

2025 – Present

Creator & Systems Architect

- Designed and implemented an enterprise agentic workflow platform decoupling a centralized Cloud Control Plane (AWC) from distributed Mac-based worker nodes via secure, origin-verified WebSocket connections.
- Engineered a durable, persisted workflow state machine that alternates human operator checkpoints with bounded agent dispatches, including mid-run Human-in-the-Loop (HITL) input requests that suspend and resume runs without losing context.
- Hardened the Mac–Cloud bridge with HTTPS-only WebSocket upgrades and origin allow-listing, plus automatic single-instance process supervision that detects and gracefully terminates duplicate bridge processes per install.

Guardz Ecosystem npmjs.com/package/guardz

2024 – Present

Creator & Maintainer · TypeScript Runtime Validation

- Authored and maintain **Guardz**, a zero-dependency TypeScript runtime-validation library (npm), extended into an ecosystem — **guardz-generator**, **guardz-axios**, **guardz-event**, and an MCP server for AI-assisted type-guard generation.
- Published architectural methodologies on runtime safety and resilient typing on Medium, reaching thousands of senior engineering readers.

Wishees wishees.com — *Founder & Lead Engineer*

2026 – Present

Founded a free wishlist and gift-intent social network (Next.js, Neon Postgres) with a local-first data model and CI-gated architecture guardrails, from concept to public launch.

PROFESSIONAL EXPERIENCE

CHECK24 Vergleichsportal GmbH

Apr. 2025 – Present

Lead Developer

Munich, Germany

- **AI-Native SDLC Architecture:** designed and deployed a multi-agent orchestration control plane (Cursor, Codex, model pipelines) that automates code review, behavioral audits, and PR triage — a 3–10x task-velocity lift across engineering teams.
- **Architectural Stewardship:** scaled enterprise frontend systems via micro-frontends and Feature-Sliced Design (FSD), holding near-zero bug density and production integrity for millions of weekly users.
- **Context Retrieval Infrastructure:** built a localized lexical RAG system with token-bounded context windows for internal architecture docs, cutting inference token costs while maximizing retrieval accuracy.
- **Engineering Mentorship & Governance:** anchored engineering craft through global code reviews, advanced TypeScript adoption, and formal ADRs; mentored developers on distributed system design through organizational restructuring.

- **Cross-Functional Knowledge Automation:** built translation workflows that turn complex architectural state into structured insight for product management, accelerating alignment and surfacing technical debt earlier.

CHECK24 Vergleichsportal GmbH

Senior Software Engineer

May 2023 – Apr. 2025

Munich, Germany

- **State & Stream Management:** established a reactive architecture (Zustand + RxJS) powering high-frequency UI updates for complex pricing engines at peak performance.
- **Resilient Data Layer:** designed type-safe API integration with a type-guard + tolerance-handling pattern — the technical foundation that became the open-source Guardz library.
- **Quality Gates & Performance:** enforced rigorous Vitest test coverage and fixed rendering/store-access bottlenecks, eliminating regressions across long-living production modules.
- **Core Product Delivery:** shipped the Real-Time Pricing Calculator and Dynamic Tariff Comparison system, handling high-traffic flows and intricate business logic.

Wagawin

Senior Front-end Engineer / Technical Lead

Sep. 2017 – Apr. 2023

Munich, Germany

- **Platform Architecture:** architected and launched the Campaign Management & Analytics Center from the ground up, defining the core application structure and internal API contracts.
- **Team Leadership & Mentorship:** acted as functional lead for the front-end team — ran weekly planning and daily briefings, and led interviewing and onboarding of new engineers.
- **Interactive Ad Tech:** engineered a high-performance “Living Ads” engine turning static ads into interactive, game-based experiences for major European publishers.
- **Quality Assurance:** built the automated E2E testing strategy (TypeScript, Selenium, Cucumber) for business-critical campaign reporting.

EARLIER EXPERIENCE

Condensed — full detail available on request.

Full-Stack Engineer — Fiverr (Freelance)

Dec 2013 – Sep 2017

Delivered 50+ client projects (React, Angular, RxJS, React Native) with a consistent 5-star rating; advised startups on CI/CD and dev-environment setup.

Software Engineer — Assignar

Feb 2015 – May 2016

Built full-stack features and hybrid mobile UI for a construction-operations platform (AngularJS, MySQL, DynamoDB, PHP/Slim).

Front-End Team Manager / Project Manager — Open Digital Ltd

Sep 2013 – May 2015

Managed the front-end team and client project delivery end to end; mentored junior developers, architected client PoCs, and standardized the agency's engineering blueprint.

Co-Founder & Full-Stack Developer — Viet Wedding Invitation

Aug 2011 – Dec 2013

Founded and built an e-commerce platform and internal management system (AngularJS, Laravel) end to end.

Executive Director & Lead Architect, Co-Owner — Kim Tuoc Software Co., Ltd

Jul 2007 – Sep 2013

Founded and led a software development firm — set engineering standards and hiring, and served as Lead Architect across all major client projects.

Graphic Designer & Game Developer / Photo Editor — VMG & Lam Tung Photo Lab

2003 – 2007

Visual design and production roots (Flash advertising, interactive games, brand systems, photo restoration) preceding the transition into software engineering.

EDUCATION

Post and Telecommunications Institute of Technology

Hanoi, Vietnam

Engineer's Degree in Information Technology

2007 – 2012

High School for Gifted Students, Hanoi University of Science

Hanoi, Vietnam

High School Diploma in Mathematics (Specialized Track)

1997 – 2000

Hanoi University of Civil Engineering

Hanoi, Vietnam

Information Technology

2000
